

The CLEMENTINE®

Mobile Wastewater Treatment System

The CLEMENTINE® is a wastewater plant in a standard 20' ISO container. Designed for transport by land, sea and air, this extremely versatile machine is purpose built to be transported just about anywhere under just about any conditions. There are no exterior tanks, holding ponds or exterior components. Quiet and free of unpleasant odours, this is the perfect wastewater solution for hard to get to remote sites and temporary camps or installations.

CLEMENTINE® is a complete wastewater treatment plant in a box. Everything needed to treat wastewater is in the single unit. This plant is a *plug and play* system that is very easy to operate and maintain. If you can operate a portable generator then you can operate a CLEMENTINE®. See specifications on reverse.

Some ideal applications for the CLEMENTINE® are:

- Mining camps
- Military camps
- Construction camps
- Oil rigs and pipelines
- Areas accessible only by air
- Environmental emergencies
- Foreign relief missions
- Temporary municipal services
