

Seprotech New Product Introduction: The Clementine®

OTTAWA, ONTARIO, 24 March 2004. Seprotech Systems Inc., one of Canada's leading manufacturers of mobile and packaged water and wastewater treatment systems, is today introducing a new product named 'The Clementine®'. This innovative system is a complete wastewater treatment plant in a standard, twenty foot, International Standards Organization (ISO) shipping container. The Clementine® is designed to serve the needs of the military, United Nations, emergency response personnel, municipalities and remote mining camps and the system is being unveiled today at a ceremony in Ottawa.

"The Clementine® serves the needs of about 150 people", said Dr. Gilles Turcotte, President and CEO of Seprotech. "This incredibly robust system is designed to be transported by road, rail, sea and even by air. In fact, the first Clementine® units are going to remote mining sites in Canada. This is our first new product introduction since our merger and restructuring in 2002 and we look forward to introducing even more in the coming months."

'The Clementine®' is the first mobile wastewater treatment plant of its kind. Free of any unpleasant odours, 'The Clementine®' is extremely quiet, stable and reliable and requires only about three hours of operator time per week. This is the first wastewater treatment plant that is so easy to use that it can be operated by virtually anybody. The concept of use is similar to that of a portable generator. 'The Clementine®' employs Seprotech's patented and proven Rotordisk® technology.

"It's sometimes difficult to make sewage treatment sexy", said Harry Marshall, Chairman of Seprotech. "The fact is that over 80% of all diseases are waterborne and wastewater is an enormous contributor to this problem. We can't just think sewage away, it's a fact of life and we have to deal with it. 'The Clementine®' introduction helps to solve some of the most difficult wastewater treatment problems in some of the most challenging places around the world. This new product is another Seprotech solution to help improve the global environment."

Seprotech is listed on the TSX Venture Exchange under the ticker symbol SET. The Company is a provider of environmental solutions in water and wastewater to the land development, municipal, industrial and military marketplace using its proprietary membrane and biological technologies.
