

SEPROTECH CLINCHES CLEMENTINE™ SALES

Seprotech Systems Inc. (TSX: SET), one of Canada's leading providers of mobile water and wastewater treatment systems, is pleased to announce that it has secured orders and begun deliveries for its newly launched Clementine™ mobile wastewater treatment plant.

“We are very happy with the market response to our new product”, said Harry Marshall, Chairman of Seprotech. “We made a commitment to developing and launching a new product line and it appears that our Clementine™ system is beginning to yield results. Industry is responding positively to our concept of building a mobile wastewater treatment plant that supports up to 150 people yet is no more complex to operate than a portable generator.”

Seprotech Systems launched the Clementine™ at a public unveiling in Ottawa in March and the company has sold three of the systems to date. Two of the systems were sold to gold and diamond mining companies who are flying their Clementine™ systems into mining camps in the Northwest Territories. Seprotech has sold the third system to the Calgary Olympic Development Association that is building a training facility for the Canadian National Ski Team on the Farnham Glacier in Alberta.

The Clementine™ systems sell for just under \$CAD 200,000 and are designed for use virtually anywhere in the world. The system incorporates Seprotech's proprietary ROTORDISK® technology. Extremely rugged and durable, the systems are purposely designed to meet International Standard Organization (ISO) shipping container dimensions and are transportable by road, rail, sea and also by transport aircraft. “These are extremely versatile systems that have a diverse customer base,” said Harry Marshall. “We will continue to aggressively market this product and we hope to make inroads in the international market as customers become more familiar with our company and the capabilities of the Clementine™.”

About Seprotech

Seprotech is listed on the TSX Venture Exchange under the ticker symbol SET. The Company is a provider of environmental solutions in water and wastewater to the land development, industrial and military marketplace using its proprietary membrane and biological technologies including the ROTORDISK® package sewage treatment plant.
