

Seprotech Receives \$1.2M Contract for Wastewater Plants in Peru

OTTAWA, ONTARIO, 06 January 2004. Seprotech Systems Inc., a leading Canadian water and wastewater treatment systems manufacturer, has received a contract awarded by a major Canadian engineering company, for the design and manufacture of four mobile wastewater treatment systems that will be delivered to a mining camp in Peru. The contract was awarded in U.S dollars and has a Canadian equivalent value of approximately \$1.2M.

“We are the leading Canadian supplier of environmental systems for the mining industry and this demonstrates our continued strength in this important marketplace”, said Dr. Gilles R. Turcotte, President and CEO of Seprotech, “The engineering development efforts that we have undertaken over the last twelve months in our line of ROTORDISK® packaged plants should further strengthen our competitiveness in the months ahead”. The ROTORDISK® is a wastewater treatment plant that can be brought into operation within three days of arrival at a site. The system is extremely quiet and free of unpleasant odours allowing the equipment to be located directly within a community.

Seprotech has developed its ROTORDISK® line of packaged and containerized wastewater treatment plants in response to a need around the world for a simple way to treat sewage. The ROTORDISK® product line is capable of producing near drinking quality water quality from sewage. “Nobody wants to have to think very much about sewage and getting rid of our wastes” said Harry Marshall, Chairman of Seprotech, “but over 80% of all diseases are waterborne and our company is making a major contribution in many countries around the world towards developing and maintaining a healthy and clean environment. We are very proud to be a Canadian environmental leader.”

Seprotech is listed on the TSX Venture Exchange under the ticker symbol SET. The Company is a provider of environmental solutions in water and wastewater to the land development, municipal, industrial and military marketplace using its proprietary membrane and biological technologies.
